

BRIGHTTV VIEWERSHIP ANALYSIS

This presentation analyses BrightTV viewership data to identify user behaviour, content performance, and viewing patterns. The insights highlight key drivers of engagement across content types, time of day, and geographic regions, and provide data-driven recommendations to support user growth and increase platform engagement.

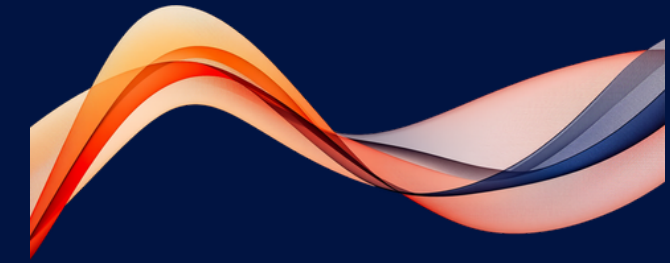

INTRODUCTION & OBJECTIVES

This presentation provides a comprehensive analysis of BrightTV's viewership data, aimed at uncovering actionable insights to drive platform growth and user engagement.

Our key objectives include:

- Understanding user behavior patterns across different demographics
- Identifying content consumption trends and popular channels
- Analyzing viewing patterns by time of day and geography
- Delivering data-driven recommendations to increase engagement
- Developing strategic insights for user acquisition and retention

USER DEMOGRAPHICS

Age Distribution

Most of our users are between 22 and 41 years old, followed by others, our dataset shows that the platform is dominated by young adults.

Gender Distribution

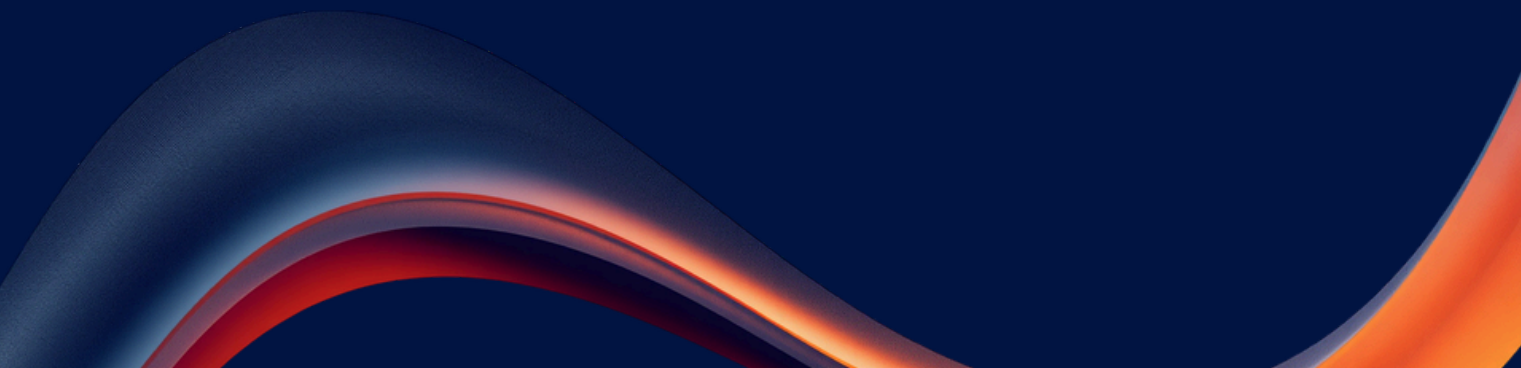

BrightTV viewership shows a balanced gender distribution with 52% female and 48% male users. Female viewers show higher engagement with drama content while males prefer sports and action genres.

Provincial Reach

Gauteng leads with approximately 37% of total users, followed by Western Cape and KwaZulu-Natal. This indicates a strong concentration of users in Gauteng.

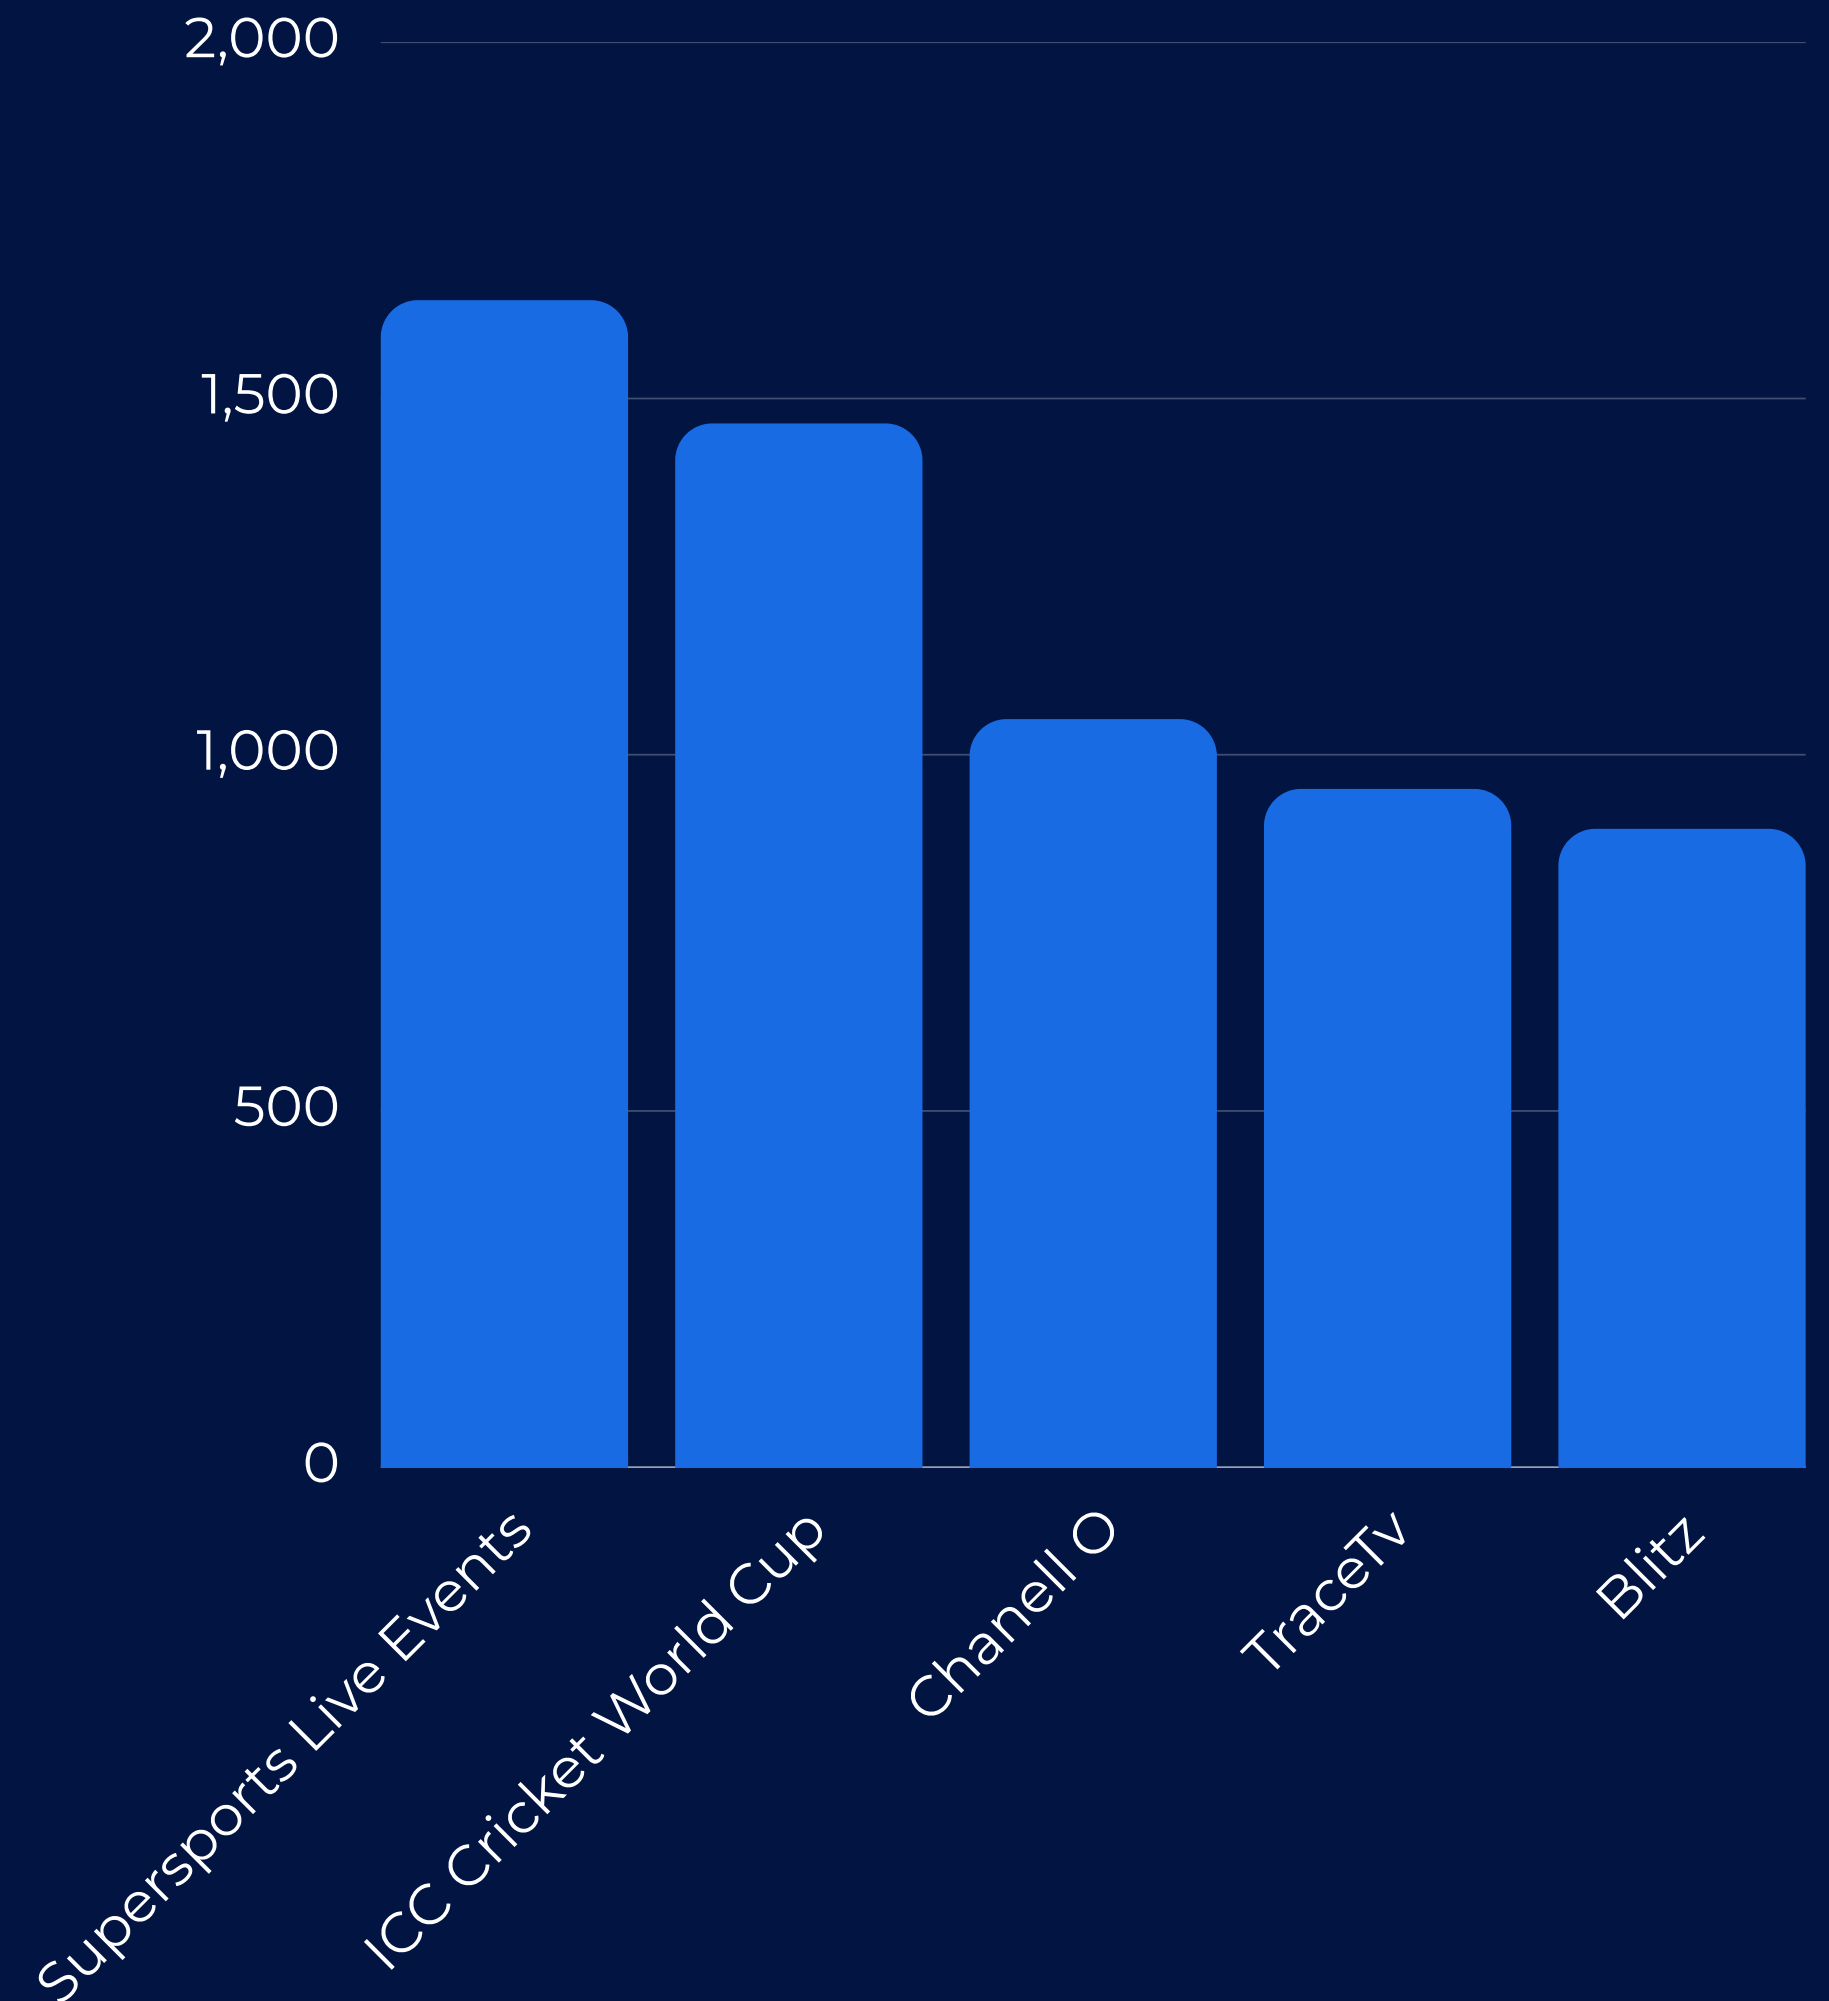

User Segments

We identify four key user segments: Binge Watchers (35%), Casual Viewers (28%), Sports Enthusiasts (22%), and Family Viewers (15%). Each segment requires tailored content strategies.

CONTENT TRENDS

Our analysis shows that sports content drives the highest viewership on the platform. Supersport Live Events and ICC Cricket World Cup are the most watched channels. Entertainment channels such as Channel O and Trace TV also contribute to overall engagement.

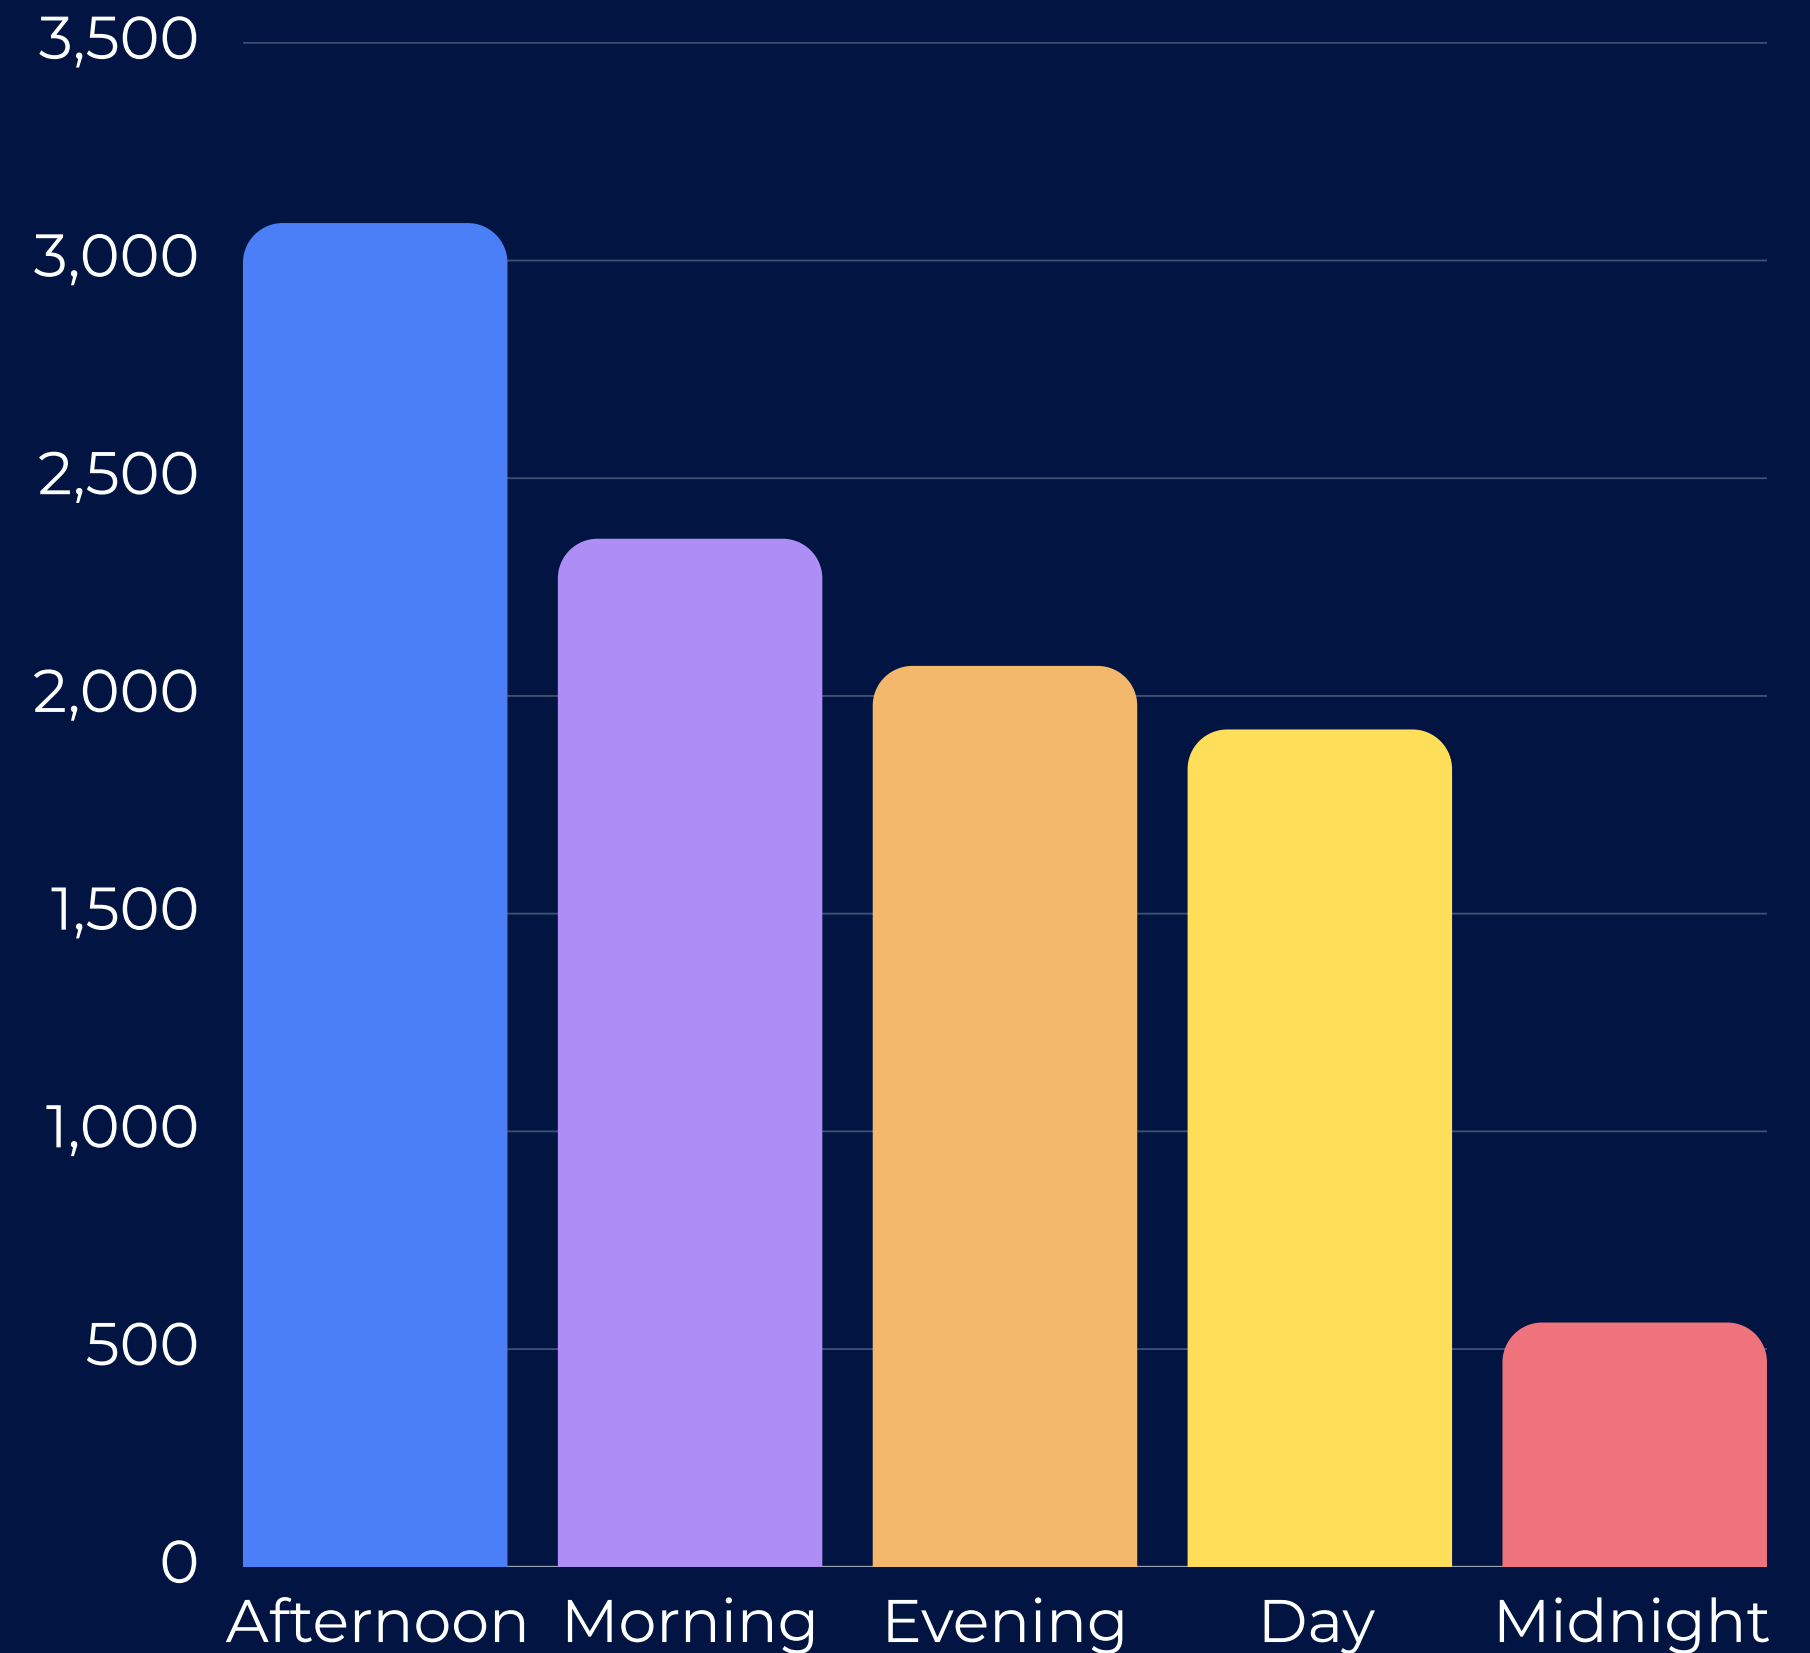

VIEWING PATTERNS

Our analysis shows that afternoon viewing drives the highest engagement on the platform.

Morning and evening periods also show strong activity, while midnight has the lowest viewership.

This indicates that users are most active during daytime hours.

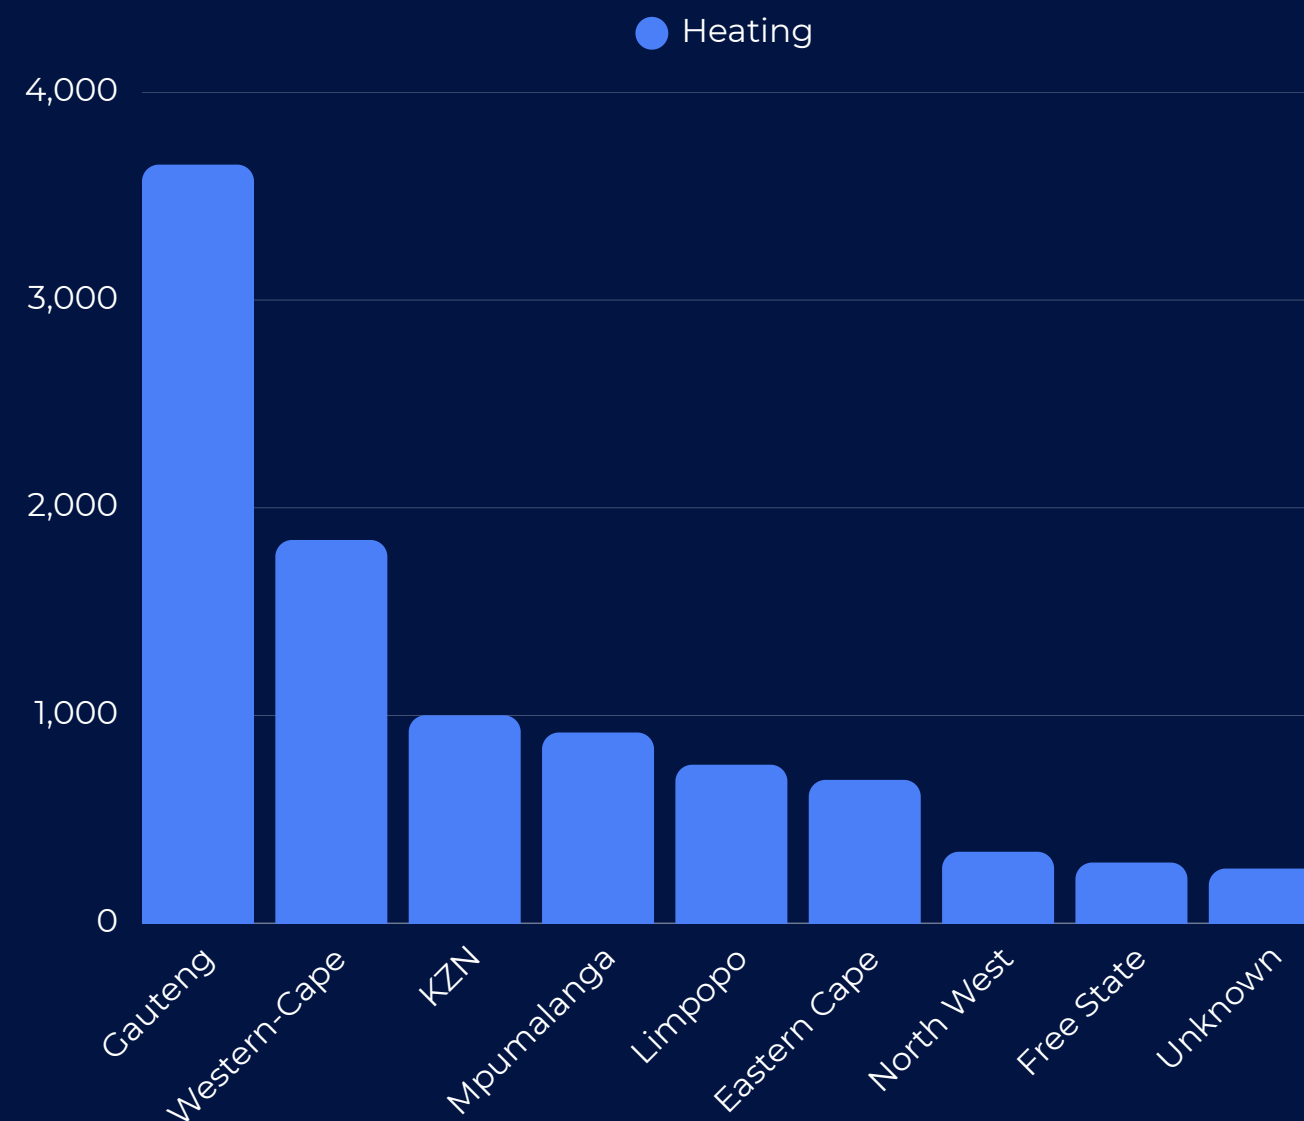

COMBINED INSIGHTS: CONTENT VS TIME OF DAY

Our analysis shows that sports content drives the highest viewership, particularly during afternoon viewing periods. Peak engagement occurs in the afternoon, where users actively consume live sports and event-based content. This alignment between high-performing content and peak viewing time highlights an opportunity to optimise scheduling and maximise engagement.

GEOGRAPHIC INSIGHTS

Our analysis shows that Gauteng has the highest number of viewers, followed by Western Cape and KwaZulu-Natal.

This indicates that urban provinces drive the majority of platform engagement. Lower engagement in provinces such as Northern Cape and Free State highlights opportunities for targeted growth strategies.

KEY FINDINGS & INSIGHTS

1. Sports content drives the highest viewership on the platform
2. Afternoon is the peak viewing period for user engagement
3. Gauteng leads in total viewership, followed by Western Cape
4. Younger audiences (18–34) form the largest user segment
5. Midnight shows the lowest engagement, presenting growth opportunities

RECOMMENDATIONS TO INCREASE ENGAGEMENT

- Increase investment in sports content to maximise viewership
- Schedule key content during the afternoon peak period
- Target high-performing regions such as Gauteng with personalised campaigns
- Improve engagement during midnight through targeted content and promotions

GROWTH STRATEGIES

- Expand marketing efforts in high-performing regions (Gauteng) to maximise user acquisition
- Target underperforming provinces (e.g., Free State, Northern Cape) with localised campaigns to drive growth
- Promote high-performing content (sports) to attract and retain new users
- Introduce incentives and promotions during low-engagement periods (midnight) to increase platform usage.

To grow BrightTV's user base, we recommend focusing on strong regions, expanding into underperforming areas, promoting high-performing content, and improving engagement during low-activity periods.
